

DIE-CUTTING & EMBOSsing MACHINE ACCESSORIES

CUTTING PLATES (2-PACK)

150815 | \$11.00

3D EMBOSsing FOLDER PLATE

149658 | \$10.00

CUTTING PLATES

Use the Cutting Plates with your die-cutting & embossing machine sandwiches. They come in a pack of two and you can use them on both sides to get twice the wear.

3D EMBOSsing FOLDER PLATE

The 3D Embossing Folder Plate is designed to work with our 3D embossing folders for an easier embossing experience. Without the 3D Embossing Folder Plate, you need to use several shims with the Standard Cutting Pad in your 3D embossing folder sandwich, depending on the die-cutting & embossing machine you use.

To create your emboss sandwich:

- Use a die-cutting & embossing machine platform as a base; no matter which machine you're using, use the standard platform that comes with your machine.
- Use the new 3D Embossing Folder with your paper in the middle.
- Then use the 3D Embossing Folder Plate on top (this replaces the Standard Cutting Pads you'd normally use).

Given the differences in machines and platforms, you may still have to add a shim to get your desired embossing results. *(You can also spritz your paper before embossing to maximize your embossed impressions.)*
